

Green & Efficient Molecules at Work

Myco Siga is a Quick, Economic and Effective Treatment for: Manjal Vaadal Noi – Yellow Sigatoka Fungal Disease.

Yellow Sigatoka is a fungal leaf-spot disease in bananas that reduces photosynthesis, weakens plants, and lowers fruit Yield, Grade and Quality.

Symptoms

Early signs: Light yellowish spots on the lower leaves, starting near the leaf blades and petioles

Progression: Spots enlarge, become oval, and the center may die, turning light grey with a brown margin

Severe infection: Numerous spots coalesce, killing large portions of leaves, reducing photosynthetic area, and weakening the plant

Pseudostem effects: Yellowish to reddish streaks may appear, intensifying toward the rhizome

Fruit impact: Infected plants produce smaller, lower-quality bunches, and in severe cases, fruits may be unmarketable

Progression

Advanced Symptom

Myco Delta Super Concentrate is:

PROVEN,

Effective against the Systemic Fungi even at a late stage (better when diagnosed early and applied)

Efficient,

Cost Effective – Less than 2 INR Rupees per Tree

Easy to use
